# PSYC1024 Clinical Perspectives on Anxiety, Mood and Stress - 2023

Course Code : PSYC

i

PSYC

Term : P e

Year : 2023

Course Code : PSYC1024

## GENERAL COURSE INFORMATION

DELIVERY LOCATION : Kensington

Standard

feelings of stress and how these concepts relate to some of the most common mental disorders - depression and anxiety disorders. Students will learn about psychology as a science and how psychological research is performed (including animal and human studies). Throughout the course we will examine how the findings from this research informs the clinical description of disorders and the treatment of anxiety, stress and low mood.

This course is appropriate for students with and without a background in science and is taught entirely online through Moodle. The final exam will be held online during the formal exam period.

N.B. This course is not a treatment program for mental health disorders and should not be viewed as a substitute for professional intervention.

## Course Aims

The general aim of this course is to examine clinical psychology perspectives on some of the most commonly occurring mental disorders in the general population. The disorders to be examined include the anxiety disorders (e.g. specific phobia, panic disorder) and mood disorders (e.g. major depressive disorder). The course will focus on the nature of emotions and the role that they play in depression and anxiety disorders. The course will also examine strategies for managing stress.
